

# Markdown Support - Final Demo

**Markdown Support Demonstration** This document demonstrates the complete Markdown support in the PDF Generator.

**Text Formatting** You can format text easily:

- Bold text for emphasis
- Italic text for subtle emphasis
- `inline code` for technical terms

**Headings Work** H3 Heading with Bold H4 Heading with Italic H5 Heading with Code

**Lists Are Supported**

**Unordered Lists**

- First item
- Second item with bold
- Third item with italic
- Fourth item with `code`

**Ordered Lists**

1. First step
2. Second step with important note
3. Third step with details
4. Fourth step with `command`

**Quotes and Links** This is a blockquote with bold text and italic text. Visit [our documentation](#) for more information. Another quote with `code snippets` included.

**Technical Content** Use the `print("Hello")` function to output text. For multi-line code, use:

```
def my_function():  
    return True
```

**Conclusion** This demonstrates that Markdown style formatting is fully supported in the PDF Generator! Use it for `quick` and easy document creation.
